**DETAILED ACTION**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/19/01 has been entered.

The papers filed on 2/19/02 have not been made part of the permanent records of the United States Patent and Trademark Office (Office) for this application (37 CFR 1.52(a)) because of damage from the United States Postal Service irradiation process. The above-identified papers, however, were not so damaged as to preclude the USPTO from making a legible copy of such papers. Therefore, the Office has made a copy of these papers, substituted them for the originals in the file, and stamped that copy:

**COPY OF PAPERS  
ORIGINALLY FILED**

---

If applicant wants to review the accuracy of the Office's copy of such papers, applicant may either inspect the application (37 CFR 1.14(d)) or may request a copy of the Office's records of such papers (*i.e.*, a copy of the copy made by the Office) from the Office of Public Records for the fee specified in 37 CFR 1.19(b)(4). Please do **not** call the Technology Center's Customer Service Center to inquiry about the completeness or accuracy of Office's copy of the above-identified papers, as the Technology Center's Customer Service Center will **not** be able to provide this service.

If applicant does not consider the Office's copy of such papers to be accurate, applicant must provide a copy of the above-identified papers (except for any U.S. or foreign patent documents submitted with the above-identified papers) with a statement that such copy is a complete and accurate copy of the originally submitted documents. If applicant provides such a copy of the above-identified papers and statement within

Art Unit: 1635

**THREE MONTHS** of the mail date of this Office action, the Office will add the original mailroom date and use the copy provided by applicant as the permanent Office record of the above-identified papers in place of the copy made by the Office. Otherwise, the Office's copy will be used as the permanent Office record of the above-identified papers (*i.e.*, the Office will use the copy of the above-identified papers made by the Office for examination and all other purposes). This three-month period is not extendable.

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 89 is rejected under 35 U.S.C. 101 because the claimed invention is not supported by either a specific asserted utility or a well established utility. This rejection is maintained for the same reasons set forth in the Official Action mailed 6/15/01.

Applicant's arguments filed 9/19/01 (entered upon the RCE filed 2/19/02) have been fully considered but they are not persuasive. Applicants arguments are based on the assertion that MUM-1 SEQ ID NO: 14 is over expressed in multiple myeloma cells. It is noted that the Official Action mailed 6/15/01 indicated that the instant specification does not show any overexpression of MUM-1 nucleic acid, but shows that MUM-1 nucleic acids are expressed. The specification does not show any expression of a MUM-1 protein SEQ ID NO: 14. The reference filed with the Official Action mailed 6/15/01 (Anderson et al) provide evidences such that one in the art would not assume that nucleic acid expression and protein expression are parallel. One in that art would not assume based on the evidence provided in the Official Actions of record and the lack of any disclosure of proteins per se in the specification as filed that MUM-1 protein

is overexpressed in multiple myeloma cell and can be used to make diagnostics, for example. The instant specification discloses that a nucleic acid is expressed with no evidence for the putative protein expression pattern or activity, for example.

Claim 89 is also rejected under 35 U.S.C. 112, first paragraph. Specifically, since the claimed invention is not supported by either a specific asserted utility or a well established utility for the reasons set forth above, one skilled in the art clearly would not know how to use the claimed invention.

The amendment filed 9/19/01 and entered upon the RCE filed 2/19/02 is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: The amendments to claim 89 include the limitation "or a fragment thereof" referring to a MUM-1 protein SEQ ID NO: 14. Applicant has pointed to page 12, lines 17-32, page 14, lines 26-30, Figure 7 and Figures 12A and 12B. Support for a protein fragment of MUM-1 could not be found at these cites. A review of the specification did not find support for such a limitation. The support referred to provides a description of nucleic acids and does not provide support, specifically or even indirectly for MUM-1 fragments.

Applicant is required to cancel the new matter in the reply to this Office Action.

Claim 89 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. See the objection to the specification above.

Any rejection made in a previous Official Action and not maintained here is withdrawn.
